SUMMARY

Software Engineer with a strong foundation in systems programming, OS concepts, data structures, and algorithms, backed by production experience at Razorpay building scalable backend services and distributed systems in Go and Python. B.Tech in AI/ML with experience across embedded-adjacent areas including real-time data pipelines, device-level integrations, and platform-level tooling. Strong analytical and problem-solving skills with 900+ competitive programming problems solved (LeetCode Knight).

EDUCATION

Birla Institute of Technology Mesra

B.Tech in Artificial Intelligence and Machine Learning | CGPA: 8.27/10

Ranchi, Jharkhand

Aug 2022 – May 2026

EXPERIENCE

Razorpay

Software Development Engineer Intern

Bengaluru, India

Jan 2026 – Jun 2026

- Built an **AI-powered developer tool using Claude (Anthropic)** that automated data-attribute onboarding — previously a multi-day process requiring manual tagging and coordination with the analytics team — by auto-generating **PySpark ETL** changes, data-quality gates, and PRs via a Slack-based PostgreSQL approval flow, **cutting turnaround time from multiple days to under 2 minutes**.
- Automated a customer data pipeline that was previously updated **manually on a monthly basis** — causing stale/incorrect customer targeting and revenue impact — by engineering an **ETL pipeline processing 550M+ records** with **Apache Airflow, PySpark, and AWS EMR**, enabling **weekly refresh** via real-time ingestion, distributed compute orchestration, and **zero-downtime atomic cutover** into PostgreSQL.
- Built and shipped a self-serve **audience intelligence platform** in **React** — replacing a manual workflow where segment creation required raising requirements to **backend engineering** via **Postman** — by designing a **recursive AND/OR rule-builder UI** with dynamic nested condition trees, a **multi-step modal state machine** for guided segment creation, and reusable, composable form components, **eliminating manual on-call intervention** and enabling any team to independently build and target audiences.
- Designed and shipped **3+ production REST APIs in Go** using a layered microservices architecture (repository / service / server), demonstrating strong **OOP and protocol-level** engineering across live merchant traffic.
- Implemented **AuthN/AuthZ** via a custom **gRPC interceptor** and **RBAC** system, securing service-to-service communication using **protocol-layer security** and access-control mechanisms.
- Improved production reliability by building a comprehensive **E2E test suite** that **caught failures before deploying on production**, and increased system **observability** through **Prometheus alerting** and custom **Grafana dashboards**.

PROJECTS

ResuTrackX | *FastAPI, Python, BERT, spaCy, Gemini, RAG, MongoDB, React* | [Live](#)

2025

- Built a full-stack AI application with a **FastAPI** backend serving **BERT + TF-IDF** ranking and **NLP extraction** (spaCy + PyMuPDF) at **under few seconds PDF** — showcasing **real-time software design** and **analytical problem solving**.
- Implemented a **RAG pipeline** using sentence-transformer embeddings and cosine-similarity semantic search to ground **LLM (Gemini)** responses in a knowledge base; achieved **enhanced precision** on a 200-resume benchmark.
- Deployed with **JWT auth + RBAC** on Hugging Face; integrated **MongoDB** for persistent storage — demonstrating end-to-end **application SW development and UI/backend integration**.

Chattrix | *MERN, Socket.io, Zustand, Cloudinary* | [Live](#)

2025

- Engineered a **real-time messaging platform** using **WebSocket (Socket.io)** supporting **100+ concurrent users** at **sub-100ms latency** — directly relevant to **real-time protocol stack** design (WebSocket).
- Built a **REST API** on Express.js + MongoDB with **Cloudinary** CDN integration, cutting media load time and sustained **uptime** on Render with global state managed via Zustand.

TECHNICAL SKILLS

Languages: C++, Go (Golang), Python, SQL, JavaScript, TypeScript

CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

Systems & Platform: gRPC, Protocol Buffers, REST

Protocols & Networking: gRPC (Protobuf), REST

Frontend: React.js, Redux, Zustand

Backend & APIs: FastAPI, Node.js, Express.js, Async Programming

Cloud & DevOps: AWS (S3, EMR, EC2), Docker, Kubernetes, Terraform, Kong API Gateway, CI/CD

Data & Storage: PostgreSQL, MySQL, MongoDB, Apache Airflow, PySpark,

Testing & Observability: Unit, Integration & E2E Testing, Prometheus, Grafana, OpenTelemetry

Tools: Git, GitHub, Postman, JWT, Agile

ACHIEVEMENTS

- Rising Star (MVP Rookie) Award, Razorpay:** Recognized as **best-performing intern** by senior engineering leadership for exceptional 3-month impact across platform, backend, and AI delivery.
- Competitive Programming: 900+ problems solved; LeetCode Knight (1926) and Codeforces Specialist (1427)** — top 5% across both platforms, demonstrating strong **analytical and problem-solving** ability.
- Adobe India Hackathon (Team Leader):** Led team to **top 4% of 2000+ teams** nationwide, owning solution architecture and execution.
- 2nd Place — INNOVATE-A-THON 2.0, BIT Mesra (Team Leader):** Beat **180+ teams** in a **24-hour** build.
- Juspay Hackathon Finalist:** Top national team for an end-to-end fintech payment solution with a fault-tolerant backend.
